

Searches & Address Validation

Customer/Vendor Master Bells & Whistles

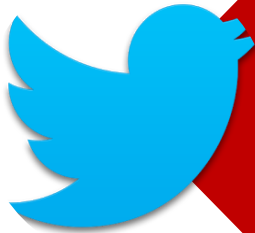

Heather Oebel | Winshuttle

Introduction

App – Winshuttle

#WUG2014 – Twitter

SSID – Winshuttle
Password – wug2014

What can extra features do for you?

Transform your business processes!

Searches

- Give people what they need when they need it in the form.
 - Prevent researching SAP directly – all functionality is in the form.
- Using Query in a Form
 - “live” query – real-time access to SAP data
 - Finding records to copy from or change
 - Help prevent duplicates

Search - Query

- Query
 - Inputs and Outputs
 - Like Operator & Equal Operator
 - Match codes - capitalization
- Designer
 - Use Repeating Table
 - Add check box to table for selection
 - Rules to hide and unhide search section
 - Rules to set fields based on selection
- Composer
 - Use Selectable Table (where appropriate)
 - No need for check box
 - Rules to set fields based on a selection

Address Validation

- No programming approach –v 10.6
 - Use plug-in for external web services
- Validates addresses
 - Suffixes and prefixes can make a huge difference.
 - Push and pull data

Actual sign in Seattle, WA

Address Validation or External Web Service

Steps for adding an external address web service

- Import a Web service
- Add the web service to the form
 - Manage Inputs
 - Manage Outputs
- Create a button for the web service call
- Set a Rule to fill in address fields after a selection is made from results of the web service call.

Example – Customer Master Demo
